Week In Review

While, I do not feel much of significance happened this week, I am glad to have gained familiarity with version control and can see it as an excellent tool for project management. Also, I was able to draw some inspiration from one of my peer's discussion post on self-motivation.

Anchor Points

1. *What have you done?*

This week I was able to gain familiarity with the version control software SourceTree and the version control platform GitHub, these tools will be invaluable in helping me stay organized over the course of my current and future projects.

2. *What are you doing?*

This week I plan on learning the steps necessary to build dynamic content boxes for the blog I am currently working on.

3. *What's Next?*

Afterwards I plan to refine my CSS skills so I can beautify my dynamic content boxes to help with user engagement and create an aesthetic that is more appealing overall.

4. *How will you accomplish this?*

I will accomplish this through trial and error and by utilizing the W3schools website as a reference to further familiarize myself with the CSS standards and tools.

Reflect and Connect

The greatest benefit I have received this week is knowledge of version control software; Since I began my web design & development journey controlling versions and changes has always been a struggle for me and the knowledge that I've gained this week has helped to eliminate a lot of the headache in the process and for

that I am grateful. With this knowledge you can expect to see better conceived and more organized work from me in the future.
